# Every 4??? months

# Love Thy Mono

# A Challenge

Have you ever had “/” vs “\” break your app? Or perhaps needed a unique version of a JDBC driver? Or had a datasource with a slightly misspelled JNDI name? Or received a patch for the JVM or app server that broke your code?

# Email

MyApp.war has been tested with the following

- On my Windows 7 desktop
- JDK 1.8.43
- Wildfly 9

Configuration:

- Datasource: MySQLDS
- Tested with:  
mysql-connector-java-5.1.31-bin.jar

## Production Environment

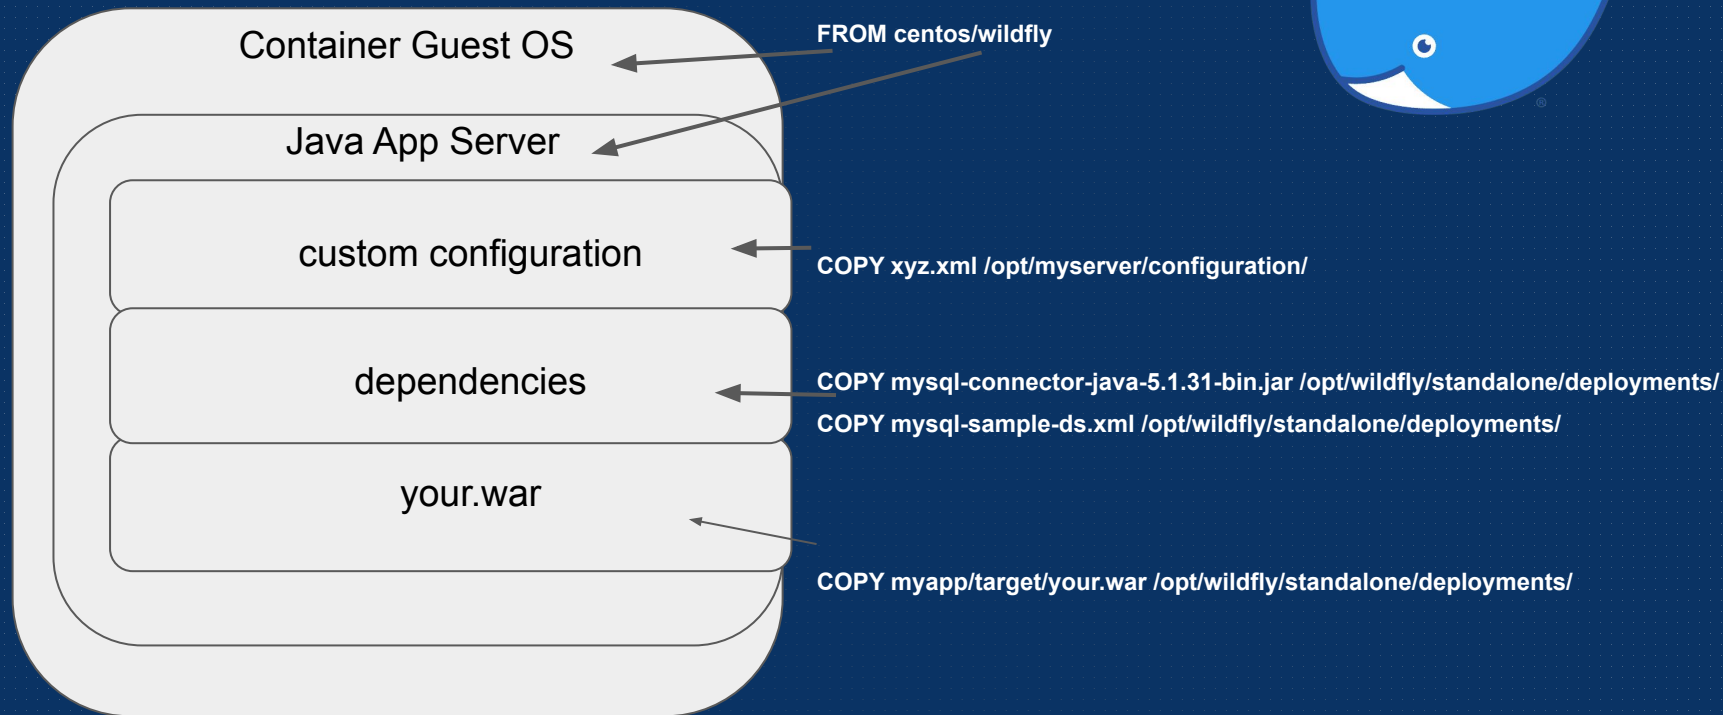

Red Hat Enterprise Linux 7

JDK 1.8

WebSphere 9

Oracle Database 12

# Dockerfile

*Container Native*

- Software that treats the container as the first-class unit of infrastructure
- Software that does not just “happen to work” in, on or around containers, but rather is purposefully designed for containers

## Drone was Launched in 2012

- Written in Go
- Built on Docker
- Multi-OS (Linux, Mac, Windows)
- Multi-Arch (amd64, arm64, ...)
- Multi-SCM (GitHub, GitLab, BitBucket, Gitea, ...)
- Self-hosted
- Small footprint

# *Drone CI* Docker Pipeline

(a.k.a. your `.drone.yml` file)

```
kind: pipeline
type: docker
name: default
```

Kind and type attributes define that this is a docker pipeline.

```
steps:
```

- name: test
- image: golang:1.18

```
commands:
- go build
- go test
```

Steps defines a series of shell commands executed inside the container as the entrypoint.

If any command returns a non-zero exit code, the pipeline fails.

```
kind: pipeline
type: docker
name: default
```

docker volume create "workspace"

steps:

- name: test

```
image: golang:1.18
```

```
commands:
```

```
- go build
- go test
```

```
docker run \
  --rm \
  -e DRONE_COMMIT_SHA=<shasum> \
  -e DRONE_COMMIT_BRANCH=main \
  -e DRONE_REMOTE_URL=<repo> drone/git
```

```
docker run \
  --rm \
  --volume workspace:/drone/src \
  --workdir /drone/src \
  golang:1.18 sh -c "go build; go test"
```

# *Drone CI* Plugins

## *Drone CI Plugins*

Drone CI Plugins are **Docker containers** that perform pre-defined tasks and are configured as steps in your pipeline

Plugins can be used to deploy code, publish artifacts, send notifications, and more

```
kind: pipeline
type: docker
name: default
```

```
- name: publish
```

```
  image: plugins/docker
```

← official Drone Docker plugin

```
  settings:
```

```
    username: kevinbacon
```

```
    password:
```

```
      from_secret: docker_password
```

```
    repo: foo/bar
```

```
    tags:
```

```
      - 1.0.0
```

```
      - 1.0
```

```
- name: notify
```

```
  image: plugins/slack
```

← official Drone Slack plugin

```
  settings:
```

```
    channel: developers
```

```
    username: drone
```

# Developer Onboarding

For a developer it is always a **boon** to have integrations to platforms via plugins, extensions with one's every day tools like Docker for Desktop , Visual Studio Code etc.,

# What are Docker Extensions?

- A way to add new **functionality** into **Docker Desktop**
- A way to **discover** new tools to solve existing problems
- No limit to the number of extensions you can install
- A way to **integrate** your **workflows** and **create automation**
- A way for the **community** and **partners** to **contribute** to Docker Desktop

# Docker Extensions SDK

- Build extensions with **React** and **TypeScript** to customize and enhance Docker Desktop
- **Fast development** of your extension with **hot-reloading** - edit code and the changes will be immediately reflected in Docker Desktop
- Seamlessly style integration **with the Docker Material UI Theme** npm package - easily replicate Docker Desktop's look & feel
- **Extensions CLI** - create, manage and validate extensions from your terminal
- Documentation with **tutorials** to help you get started
- Develop extensions on **all platforms!**  
Windows, WSL2, Mac (Intel and Apple Silicon) and Linux

# *Drone Desktop*

**A Docker Desktop Extension for Drone**

*Demo*

# View and Manage Drone Pipelines

- Discover Drone pipelines from local machine
- View Pipeline status i.e running state of all pipelines and its containers
- Remove pipelines
- Running pipelines
- Open Drone pipeline project in Visual Studio Code

<https://github.com/kameshsampath/drone-desktop-docker-extension>

Long ago, there lived a clever jackal in a dense forest. One day, he came across a dead elephant. He wanted to eat its flesh and keep the whole of it for himself, but couldn't cut through its tough hide. While he was waiting for help, a lion arrived. The jackal told him, "Your Majesty, I have been guarding it for you, please have a taste." "I eat only fresh animals," replied the lion and went on his way. The jackal was happy. Next came a tiger. He said to the tiger, "A hunter has killed the elephant with a poisoned arrow. Whoever eats its flesh would die. I'm guarding it to save others lives." The tiger got scared and soon disappeared into the forest. Then came two vultures. The jackal told them, "I've sold its skin to hunters. If they ever see you eating it, they'll kill both of you." The vultures quickly flew away. But the jackal still looked for someone who would make it easy for him to eat the carcass. At last, there came a leopard, which had sharp teeth. He said to him, "Why don't you take a bite? It has been killed by a lion, who has gone home to bring his family. When I see him coming, I'll alert you and you can run away. The leopard started cutting open the elephant's hide. As soon as it was about to eat its flesh, he shouted, "There comes the lion." The leopard vanished into the forest. The jackal happily enjoyed the flesh of the elephant.

**MORAL:** The merits of being clever are undeniable. A smart worker is more likely to become successful at work. They come with quick and easy problem-solving skills that help them rise fast through the ranks.
